

TECH SUPPORT COMPANY. SINCE 2016.

Build software products with one partner — *delivery, team management, and training.*

Sevendyne is a tech support company with app development at its core. We deliver software products through dedicated engineering teams, and we also run team management operations (India payroll, HR, compliance) plus technical training for client teams and cohort programmes — one desk in Kochi since 2016.

Services at a glance: app development teams, team management (HR & payroll), and technical training. Details are listed in the “How clients engage with Sevendyne” section below.

2016

Founded — Kochi,
Kerala, India

Long-term

Dedicated client programmes —
selective on new intake

UK+DE

Primary markets —
multi-year engagements

I

In-house HRMS
(not sold as SaaS)

HOW CLIENTS ENGAGE WITH SEVENDYNE

- 01 App development teams**
Dedicated engineering teams for product delivery across desktop, embedded, web, and data platforms — with long-term release accountability. See sevendyne.com/offshore-app-development.
- 02 Team management (HR & payroll)**
Statutory compliance (PF, ESIC, TDS, GST), payroll cycles, EOR where needed, and structured people operations for client-run teams. See sevendyne.com/india-payroll-compliance.
- 03 Technical training and upskilling**
Corporate upskilling (embedded C++, Python, data, PLC/SCADA) and cohort programmes aligned to practical engineering work — see sevendyne.com/technical-training.

TECHNICAL GOVERNANCE

How we protect delivery quality

Clients do not just receive coders. Every delivery stream runs with founder-led governance designed for reliability, security, and predictable releases.

- Structured SDLC: discovery, sprint planning, acceptance criteria, release sign-off.
- Code quality controls: peer reviews, branch discipline, and merge approvals.

- Automated checks: regression tests, build pipelines, and deployment checklists.
- Security and reliability: dependency checks, access controls, and audit-ready documentation.

App delivery is priced first, with optional team management and training layers — sevendyne.com/pricing · scope confirmed per engagement.

ONE STUDIO, NOT A VENDOR PANEL

Fragmented vendors vs Sevendyne (one studio)

DIMENSION	FRAGMENTED (MULTIPLE VENDORS)	SEVENDYNE (UNIFIED INDIA OPS, TEAMS & SOFTWARE)
Scope	Dev shop + payroll bureau + ad hoc advisors — no single owner of outcomes	Software-led delivery: app development first, with team management (HR/payroll) and training as connected services under one accountable partner — sevendyne.com
Data	Spreadsheets and tools that don't agree	One studio aligns people data, payroll, and delivery cadence — fewer gaps at month-end
Buying motion	Multiple POs, multiple SLAs	Fixed operational retainers + performance milestones for build work — anchored to reliability, not cheap headcount arbitrage
Risk	What ships and how India runs drift apart	Release discipline and India operations stay tied to the same engagement team
Fit	Teams comfortable coordinating many vendors	Indian and international companies with India-based staff who want governance without building a full in-country back office

We use proprietary internal tooling to run our own operations — not sold as SaaS. It supports accuracy and audit trails for clients on our programmes.

PRICING — APP DEVELOPMENT FIRST

Primary commercial motion: app development projects and delivery programmes. Team management (HR/payroll) and training are quoted as add-on or parallel tracks based on engagement shape.

TRACK	INDICATIVE (FROM)	WHAT IT INCLUDES	TYPICAL FIT
App development projects (primary)	USD 1,500–60,000+ / project (scope-based)	MVPs, product modules, platform builds, integrations, modernization, and long-term engineering delivery.	Companies prioritizing software outcomes, roadmap velocity, and release reliability.
Dedicated engineering teams	USD 2,000+ / engineer / month	Offshore app-development teams with delivery governance, sprint execution, and technical ownership.	Multi-month or multi-year product programmes needing stable engineering bandwidth.
Team management (HR & payroll)	₹5,500–13,500 / head / month	India payroll, statutory compliance, HR records, and EOR-style employment operations where required.	Cross-border teams that need governed India operations without building in-house payroll infra.
Technical training & upskilling	₹2,000 / learner / month (cohort) or custom B2B quote	Python, data, embedded, and delivery-standard upskilling aligned to practical project workflows.	Client teams and learner cohorts needing structured, mentor-led capability building.

Commercial note: final numbers depend on scope, urgency, and delivery model. We provide transparent proposals separating app build cost, team operations cost, and training cost.

HOW WE RUN PROGRAMMES INTERNALLY

Delivery and India operations stay on one rhythm

Behind the scenes we operate a unified internal stack for CRM hygiene, payroll analytics, and team governance — not sold as SaaS. It keeps what ships and how your India footprint runs on the same facts, with structured workflows instead of inbox

theatre.

PIPELINE & LEAD HYGIENE PAYROLL ANALYTICS TEAM GOVERNANCE HIGH-ACCURACY ROUTINES STRUCTURED WORKFLOWS
AUDIT-READY REPORTING

Where deployed, we pair this with Zoho People, Payroll, and Books — structured data and reliable month-end visibility.

- Real-time registers and visibility; employee record hygiene in rhythm.
- Finance-ready reporting for close, audits, and stakeholder updates.
- Transparent trails — governance links what shipped to how the org runs.

CASE SNAPSHOTS

UK — Industrial automation (multi-year)

PLC/SCADA, C++, Qt — dedicated India engineering capacity with India-side payroll and operations on one desk. Client names under NDA.

Germany — Navigation systems (since 2022)

Embedded C++, real-time systems — full-time team in Kochi; employment and compliance run by Sevendyne.

Germany — Data analytics (since 2024)

Python and data engineering team built from scratch; ongoing engagement.

WHO THIS IS FOR

Indian and international companies with India ops

Founders and engineering leaders who need payroll, compliance, and delivery to stay aligned — without building a full in-house India back office.

Operations-heavy growth

Teams where people data, statutory filings, and product delivery must not drift apart — one accountable studio keeps finance, HR, and engineering on shared facts.

Strategic partnerships

Regional or channel partners who want India payroll, teams, and software under one governed programme — we plug in alongside your local go-to-market. sales@sevendyne.com

FOUNDER-LED ACCOUNTABILITY

Every engagement is overseen by Sevendyne's founder — an engineering-led practice applied to payroll, HR compliance, and product delivery, not a general consultancy with a side of tech. Twenty years in systems engineering; India programmes since 2016. Accountable decisions and reliable operations, not checklist theatre.
